

Teleworker

enabling the work/life balance

Teleworking from Solution1 effectively gives the employee the same IT experience they would receive in the office, together with the correct training and tools to perform their job.

Solution1 teleworking services

Teleworking services can benefit organisations by increasing employees' quality of life and improving access to work, culminating in increased productivity, staff loyalty and retention.

Solution1 has developed four levels of teleworking solutions, ranging from secure office access to an always-on service keeping employees available anytime, anywhere.

Teleworker Standard

Secure business grade internet access.

Teleworker VPN

Managed hardware service enabling site-to-site virtual private networking capability plus secure internet access.

Teleworker Advanced

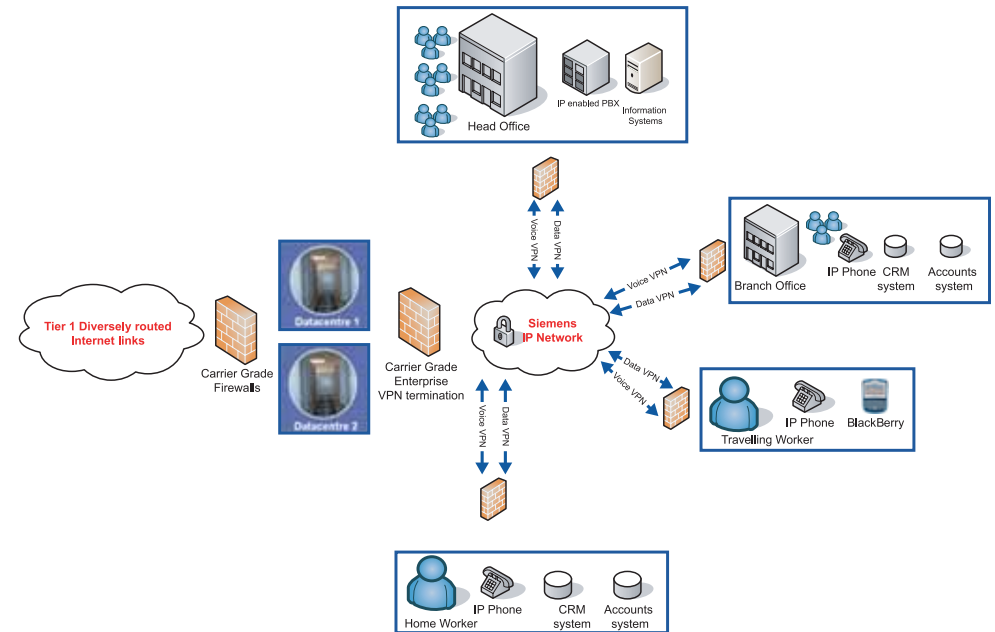

IP desktop phones or computer clients, voice traffic prioritisation, virtual private networking capability, plus secure internet access.

Teleworker Anywhere

BlackBerry, Microsoft Exchange, voice traffic prioritisation, site-to-site virtual private networking capability, plus secure internet access.

Services

- Access to a private closed network acquired through the strategic relationship between Solution1, BT and Easynet
- End to end managed service supported by Solution1, which includes procurement, proactive management and end user helpdesk

Think - improved work performance, quick response times to your customer, less absenteeism, and improved recruitment and retention. In most cases these offset additional costs such as home equipment. Mobile teleworking also cuts office costs considerably. However, poorly designed teleworking schemes can be financially negative.
